01 Research Radar

02 GitHub Benchmark Arena

03 Agent Failure Lab

04 Voice Control — ARM

05 Robot Skill Passport — ARM TEST

06 LabOS

Rules for all tracks

Deliver a repo

README, the data used, one result measured against a baseline, known limitations.

Teams of 4–6

Every team has 4 to 6 people.

Grok is essential

Grok (the API, Grok Voice or the Bot) must be essential to how the solution works, not decorative.

Hardware slots

Arms and dog: 30 minutes, always with staff. Printed tool, no gripper.

Data

Only public data, synthetic data or data provided by the companies.

Video demo, ~2 minutes

Every team submits a video demo of about 2 minutes by Thu 16:00.

Code of Conduct

Build boldly.
Treat everyone well.

Respect everyone

Be kind and inclusive. No harassment or discrimination, in person or online.

Take care of the museum

The exhibits are historic. Handle with care and follow staff instructions.

Safety first with hardware

Robots, arms and drones only in your slot and always with staff.

Play fair

Only public, synthetic or company data. Credit your sources.

Speak up

If something feels wrong, tell the organisers or museum staff right away.

We will be filming.

Video will be recorded during the event.

Prefer not to be filmed?

Please let the organisers know.

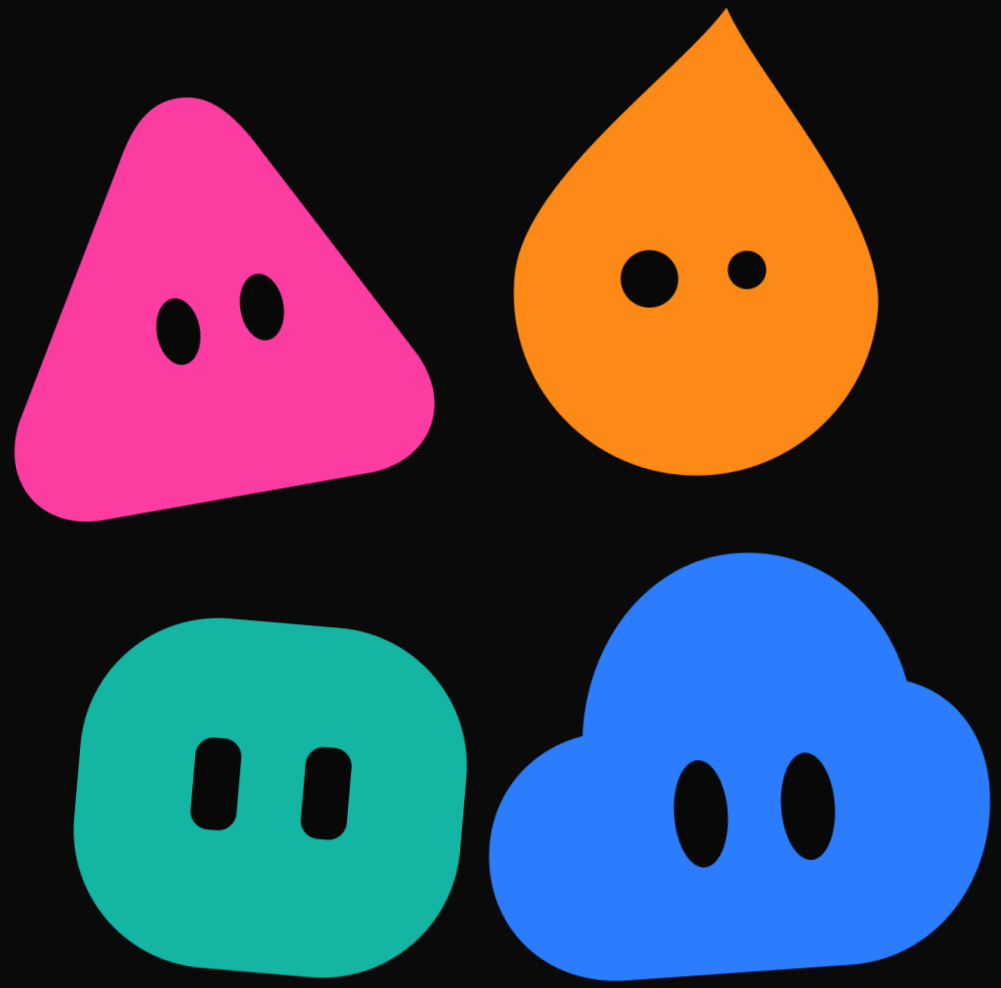

Teams in numbers

16 teams and 65 participants across 10 tracks. Every team has 4 to 6 people.

Numbers from the registration portal on 3 November; they may change at check-in.

You don't have a team?
No problem.

Just meet and mingle, then join a couple of fellow builders and create your winning team.

Teams of 4–6

Let's build

Video demo **Thu 16:00** · Awards **Thu 21:00**

Show something on Thursday that didn't work when you started.
